

SARAH TABASSUM

Business Analyst

San Jose, CA | +1 (510) 714-5424 | sarahtabassum057@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Results-driven Business Analyst with 6+ years of experience translating complex business needs into actionable solutions across fintech, e-commerce, HR tech, and financial services. Delivered measurable impact; reduced data discrepancies by 25% through advanced SQL validation at PamTen, improved issue resolution accuracy by 12% at Amazon through Python-driven analysis, and reduced post-release defects by 20% through structured UAT and root cause analysis. Expert in the full BA lifecycle, requirements elicitation, BRDs, FRDs, RTMs, process mapping, stakeholder management, and UAT, with a strong technical edge in SQL, Python, and Power BI that enables deeper data-driven analysis than a typical BA. Experienced working in Agile/Scrum environments across cross-functional teams spanning product, engineering, QA, and business leadership. Currently serving as a Financial Business Analyst at RAZR Capital LLC, driving business analysis, financial modeling, and process improvement, while also contributing BA expertise to SportsPulse, a live AI-powered SaaS platform in the \$17.5B sports management market.

TECHNICAL SKILLS

Programming: SQL (Advanced: Joins, CTEs, Window Functions, Subqueries), Python (Pandas, NumPy, Scikit-learn), R, JavaScript, .NET, C++

Data Visualization & BI: Power BI (DAX, M Query, Complex Dashboards), Tableau, Looker Studio, Excel (Advanced: Pivot Tables, VLOOKUP, Power Query, Macros), Google Analytics

Financial Analysis: Financial Modeling, Investment Analysis, Due Diligence, Capital Allocation, Portfolio Analysis, Forecasting & Budgeting, Scenario Analysis, Revenue Analysis, Unit Economics (ARR, LTV, CAC, Churn), KPI Tracking, Variance Analysis

Business Analysis: Requirements Elicitation, BRDs, FRDs, RTMs, User Stories, Acceptance Criteria, Use Case Modeling, Business Case Development, Feasibility Analysis, Gap Analysis, As-Is/To-Be Process Mapping, Business Process Reengineering, Change Management, Impact Analysis, Stakeholder Management

Data & Cloud Engineering: ETL Pipelines, Data Modeling, Data Governance, Data Warehousing, Data Validation, Data Profiling, Data Cleansing, Azure (DevOps, Data Services), Snowflake (concepts), REST API Integration, JSON

Analytics & ML: Predictive Analytics, Regression Analysis, Classification, A/B Testing, Funnel Analysis, Customer Behavior Analysis, EDA, Feature Engineering, Supervised Learning (Logistic Regression, Decision Trees, Random Forest), Model Evaluation

Testing & QA: UAT Planning & Coordination, Functional Testing, Regression Testing, Test Case Design, API Testing, Defect Tracking, Root Cause Analysis, Process Optimization

Tools & Methodologies: Jira, Confluence, Azure DevOps, ServiceNow, Git/GitHub, Power Automate, n8n, Figma, Balsamiq, Lucidchart, MS Visio, Agile/Scrum, Waterfall, SDLC

PROFESSIONAL EXPERIENCE

Financial Business Analyst

Jan 2026 – Present

RAZR Capital LLC, Remote, USA

- Analyze financial data and market trends across 5+ investment opportunities to support capital allocation decisions, delivering actionable insights and executive-level reports to senior leadership
- Build and maintain 3+ financial models in Excel covering revenue forecasting, scenario analysis, and portfolio performance to support strategic planning and investment evaluation
- Assist in due diligence and financial analysis for 4+ potential investments, assessing risk-return profiles, valuation assumptions, and market positioning to support go/no-go decisions
- Elicit and document business requirements from stakeholders, producing BRDs, process flows, and gap analyses to assess operational efficiency and drive process improvement initiatives
- Develop and maintain RTMs and functional specifications to ensure alignment between business requirements and technical deliverables across 6+ company projects

- Coordinate UAT planning and execution with cross-functional stakeholders, validating that implemented solutions meet acceptance criteria and business objectives
- Automate financial data extraction, cleaning, and reporting workflows using Python (Pandas, NumPy), reducing manual reporting effort and improving data accuracy across investment tracking
- Design and maintain 4+ Power BI dashboards with advanced DAX measures to monitor financial KPIs, investment performance, and operational metrics in real time

Business Analyst

Jan 2025 – Jan 2026

PamTen Inc., Remote, USA

- Reduced data discrepancies by 25% through advanced SQL validation (CTEs, window functions, complex joins) across 10+ integrated hiring modules, enabling reliable downstream reporting and strengthening audit readiness
- Drove process improvement and data quality initiatives by performing comprehensive data profiling, integrity checks, and anomaly analysis in Python and SQL, improving consistency across multiple release cycles
- Achieved 100% UAT sign-off for all assigned releases by translating complex business rules into BRDs, FRDs, and RTMs with zero critical requirement gaps, in close collaboration with engineering and QA stakeholders
- Reduced post-release defects by 20% by leading structured defect triage, root cause analysis, and fix validation using SQL regression checks and automated test scripts
- Validated AI-supported workflow automation by testing n8n logic and REST API integrations, ensuring rule execution and data outputs aligned with acceptance criteria across interconnected modules
- Accelerated cross-functional issue resolution by aligning product, engineering, QA, and business stakeholders on data logic, workflow behavior, and change management requirements
- Built KPI reporting dashboards in Power BI to monitor workflow outputs and operational metrics, supporting data-driven decision making for leadership
- Authored SOPs and knowledge transfer materials, improving team onboarding efficiency by 30% and standardizing validation and testing processes

Business Analyst

Sep 2021 – Aug 2023

Amazon Development Center, Hyderabad, India

- Improved issue resolution accuracy by 12% by analyzing large-scale customer and operational datasets using advanced SQL and Python (Pandas, NumPy) to identify abnormal transaction patterns and escalation bottlenecks
- Applied statistical analysis and correlation studies across multi-source datasets using Python and R to trace escalation behavior, improving visibility into high-risk cases and supporting data-driven decision making
- Defined rule-based decision logic and data-driven acceptance criteria by validating expected outcomes against historical data patterns, ensuring workflow changes met compliance and operational requirements
- Built and maintained Power BI dashboards (DAX, M Query) tracking SLA adherence, escalation volume, and defect trends, replacing manual Excel reporting and cutting data preparation time by 15%
- Reduced repeat issues by 10% through root cause investigations correlating system logs, SQL query outputs, and Python/R analytical results, driving preventive solutions with engineering teams
- Designed comprehensive UAT test cases with SQL validation and Python-based automated checks to verify customer security workflow changes performed as intended

Business Analyst

Sep 2020 – Sep 2021

Synchrony Financial, Hyderabad, India

- Acted as primary liaison between business users, operations, and technical teams in a regulated financial environment, leading requirements elicitation workshops and ensuring alignment on scope, compliance constraints, and stakeholder priorities
- Conducted As-Is process analysis and designed To-Be workflows to drive process improvement across issue handling and escalation management, improving handoff clarity and operational consistency
- Authored comprehensive BRDs and FRDs capturing business rules, workflow logic, data validation requirements, and functional specifications to support accurate technical implementation
- Created swimlane diagrams and process flow maps using Lucidchart and MS Visio to visualize workflow changes, enabling faster stakeholder alignment across technical and non-technical audiences

- Converted requirements into Agile user stories with acceptance criteria, participating in backlog grooming, sprint planning, and sprint reviews to support iterative delivery
- Produced wireframes and mockups in Balsamiq and Figma to facilitate early stakeholder feedback, reducing downstream rework by 25%
- Analyzed incident and case data using advanced Excel (Pivot Tables, VLOOKUP, conditional formatting) to identify recurring patterns and support root cause discussions
- Coordinated UAT sessions with development and QA teams to validate implemented changes against FRDs and To-Be expectations, ensuring stable releases

Junior Software Developer

Jun 2019 – Aug 2020

Ardra Design Studio, Hyderabad, India

- Developed backend features using Python and .NET (C#, ASP.NET), applying object-oriented and modular design principles that improved code maintainability and reduced feature enhancement time by 30%
- Implemented RESTful APIs across Python and .NET services for reliable data exchange using JSON payloads between backend systems and frontend UI components
- Collaborated with business stakeholders to gather and document requirements, translating functional specifications into technical tasks and supporting change management across delivery cycles
- Optimized SQL queries and data access patterns (SQL Server, PostgreSQL), improving API response times by 25%, and contributed to feasibility assessments for new feature requests by evaluating technical constraints against business requirements

PROJECTS

SportsPulse — AI-Powered Sports League Management Platform

Jan 2026 – Present

sportspulse.us | Financial Business Analyst — Remote

- Contributing as a Financial Business Analyst on a live SaaS platform serving 24+ leagues and 1,847+ players across 3 global markets, within the \$17.5B sports management industry
- Conduct financial modeling and revenue analysis across 3+ subscription tiers and league billing cycles, supporting unit economics tracking (ARR, LTV, CAC, churn) to inform pricing and growth decisions
- Perform competitive analysis and market research to evaluate platform positioning against legacy league management tools, informing pricing strategy and go-to-market decisions
- Analyze 8+ platform KPIs, including season revenue trends, fixture completion rates, referee utilization, and automated collection rates (98% target), to identify operational improvement opportunities
- Develop 5+ business analysis artifacts (BRDs, process flows, stakeholder maps) to support feature prioritization across the scheduling engine, revenue module, and family hub product areas
- Build executive dashboards and performance reports to track league health metrics, player safety compliance (SafeSport), and predictive operational risk scores

Customer Churn Classification Model

Jan 2026

Personal Project

- Built supervised ML classification model in Python (Scikit-learn) to predict customer churn with 85% accuracy, performing EDA, feature engineering, and evaluating Logistic Regression, Decision Tree, and Random Forest models using precision, recall, F1-score, and ROC-AUC
- Created Matplotlib and Seaborn visualizations to interpret model outputs and communicate churn drivers, supporting data-driven retention strategy recommendations

AI-Enabled Staffing Portal

May 2025 – Dec 2025

PamTen Inc. | Business Analyst — Remote

- Conducted end-to-end business and data analysis across 10+ hiring modules, reducing manual screening effort by 35% through process optimization and workflow redesign
- Designed Power BI executive dashboards with complex DAX measures, enhancing hiring decision visibility by 40% with real-time pipeline, time-to-hire, and recruiter performance metrics

- Led Agile ceremonies (backlog refinement, sprint planning, UAT) using Azure DevOps and Jira, driving stakeholder adoption and cross-functional alignment

Uber Ride Allocation Optimization

Sep 2024 – Dec 2024

University of New Haven | Business Analyst

- Analyzed 100,000+ ride records using SQL and Python data profiling to uncover demand patterns, allocation gaps, and service bottlenecks across regions
- Applied regression and predictive analytics in Python (Scikit-learn) to forecast peak demand and optimize driver-rider matching, reducing allocation lag by 12%

EDUCATION

Master of Science, Business Analytics

Aug 2023 – Dec 2024

University of New Haven, Connecticut

Relevant Coursework: Data Analytics, Business Intelligence, Financial Analysis, Predictive Analytics, Database Management, Data Visualization

Bachelor of Technology, Computer Science Engineering

May 2019

Mewar University, India

CERTIFICATIONS

Supervised Machine Learning: Regression and Classification

Jan 2026
